THE CURE FOR THE COMMON PHARMACY

There was a time when the Apothecary was a place where you could get safe, reliable medicine, carefully prepared by experienced professionals. It was a place where your pharmacist counseled you regarding your prescriptions, was pro-active on your behalf and carefully coordinated your care with your health care practitioner. But in today's world, something's been forgotten: Your pharmacy should be about your health — not selling Cheetos and lawn chairs. At Apothecary by Design we are uniquely focused on the practice of pharmacy. Our integrated pharmacy model brings together traditional prescriptions with customized compounded medications, nutritional support and cutting-edge specialty pharmacy services — providing patients and their health care providers with a wide range of tools and expertise.

PRESCRIPTION COMPOUNDING FOR BETTER PATIENT CARE

For anyone who's ever had difficulty swallowing pills, been allergic to dyes or preservatives, or simply needed a dosage not commonly available from manufacturers; pharmaceutical compounding can be an ideal solution. At Apothecary by Design, our team works with health care providers to create customized medications to meet each patient's need.

Our compounding pharmacy uses pure, active ingredients sourced from FDA Approved facilities to create individualized medications that are just right for you. Our drug delivery methods include rapid dissolve tablets, capsules, lozenges, liquids, creams, injections and suppositories. Whether it's making a dye-free liquid suspension, a topical pain medication or a specific hormone combination, our clinicians can tailor dosage levels, modify strengths and change how a medication is delivered.

“Apothecary by Design is a great option for my practice. The service is excellent and allows me to prescribe compounded medications that provide cost-effective and innovative solutions for my patients. The nurses on staff also provide an additional level of clinical support not found in most pharmacies. I highly recommend them.”

— Dr. James Flaherty, OB/GYN, Portland, Maine
