the weekends. Prescription pick-up is still available.

INTEGRATED PHARMACY SERVICES

www.apothecarybydesign.com

THE CURE FOR THE COMMON PHARMACY

There was a time when the Apothecary was a place where you could get safe, reliable medicine, carefully prepared by experienced professionals. It was a place where your pharmacist counseled you regarding your prescriptions, was pro-active on your behalf and carefully coordinated your care with your health care practitioner. But in today's world, something's been forgotten. Your pharmacy should be about your health — not selling Cheetos and lawn chairs. At Apothecary by Design we are uniquely focused on the practice of pharmacy. Our integrated pharmacy model brings together traditional prescriptions with customized compounded medications, nutritional support and cutting-edge specialty pharmacy services — providing patients and their health care providers with a wide range of tools and expertise.

“ I am old enough to remember what it was like to receive good service from shops and businesses. In the fast-paced world of chain stores, it's obvious that Apothecary by Design still values service to its customers.”

— Janis W., ABD Customer

NUTRACEUTICAL EXPERTS, AT YOUR SERVICE

At Apothecary by Design we take a comprehensive view of your health and well-being. While medications and prescriptions are essential for disease management, dietary supplements play a role in improving quality of life. Many prescription drugs can also block your body's ability to absorb or create essential vitamins and minerals, depleting critical nutrients. Our staff understands that nutraceuticals (high quality nutritional supplements) are complex and often confusing with so many brands and products available. Our wellness specialists are committed to sourcing premium quality products and serving as a professional resource to patients. We excel at tracking down hard to find products, and we even ship them right to your home.

Our lead pharmacist, Greg Boucouvalas, RPh, MS, has a Master of Science in Human Nutrition, and is up to date with the most current advances in natural medicines.

OUR AREAS OF NUTRACEUTICAL EXPERTISE
